Massachusetts General Hospital offers sophisticated diagnostic and therapeutic care in virtually every specialty and subspecialty of medicine and surgery. In July 2012, Mass General moved into the number one spot on the 2012-13. *U.S. News & World Report* list of "America's Best Hospitals." Mass General conducts the largest hospital-based research program in the United States and is the oldest and largest teaching affiliate of Harvard Medical School.

An integral part of one of the world's most distinguished academic medical centers, the Massachusetts General Hospital Cancer Center is among the leading cancer care providers in the United States.

U.S. News & World Report consistently ranks the Mass General Cancer Center as one of the top ten cancer centers in the country. Its nurses were the first in Massachusetts to achieve Magnet status from the American Nurses Credentialing Center in recognition of the hospital's exceptional nursing care.

Known for providing customized innovative treatments and compassionate care to both adults and children, the Cancer Center comprises 24 fully integrated, multidisciplinary clinical programs and a vast array of support and educational services. Its network of affiliations extends throughout New England and the southeastern U.S.

The Cancer Center's commitment to eradicating cancer is fueled by scientific investigation conducted as part of one of the largest hospital-based research programs in the nation. Through a powerful synergy between laboratory scientists and bedside physicians, the Mass General Cancer Center fosters innovation in all phases of cancer research. Physician investigators conduct nearly 400 clinical trials annually.

The Massachusetts General Hospital Cancer Center is proud to be a founding member of a Harvard Medical School consortium designated by the National Cancer Institute as a comprehensive cancer center. This prestigious seven-member center forms the largest cancer research collaboration in the country. The promising new treatments developed through this partnership are revolutionizing the future of cancer medicine.

Massachusetts General Hospital created the Critical Care Center in 2010 to unify efforts across its nine intensive care units (ICU) to promote the hospital's clinical, education, research and outreach missions.

The vision of the Mass General Critical Care Center is to be a regional benchmark for delivery of patient-focused, family-centered critical care, to be a national model for critical care delivery and education, and to be an international leader in basic translational and clinical research.

By its nature, care for the critically ill and injured is optimized when practiced by a multidisciplinary team. This is true not only for the clinical mission but also for the education, research and outreach missions. The Critical Care Center collaborates with clinicians, educators, scientists and administrators at several Boston institutions, including teaching affiliates of Harvard Medical School. The Critical Care Center also networks with other leaders in critical care through national and international research and performance improvement
